5.8

5.41 x 2.69 x 0.37 inches
137.4 x 68.2 x 9.3 mm
HTC One

Mobile Usability

Mobile Usability

“The interface is your product. What people see is what you're selling. If you just slap an interface on at the end, the gaps will show.”

– Getting Real, 37Signals

Mobile Usability

“The interface is your product. What people see is what you're selling. If you just slap an interface on at the end, the gaps will show.”

– Getting Real, 37Signals

So...make it count!

Mobile Usability

A few tips:

Design with real content

Try to get all of your content up-front, then start designing. Designing around placeholder images and Lorem Ipsum text can lead to problems later.

Mobile Usability

A few tips:

Make it universally usable

Instead of designing for each device/browser, design for every device/browser. This ensures great usability regardless of device.

Mobile Usability

A few tips:

44 px rule

Apple recommends a touch space of at least 44x44px, while Microsoft suggests at least 34x34px. Make buttons and other links easy to click.

Testing

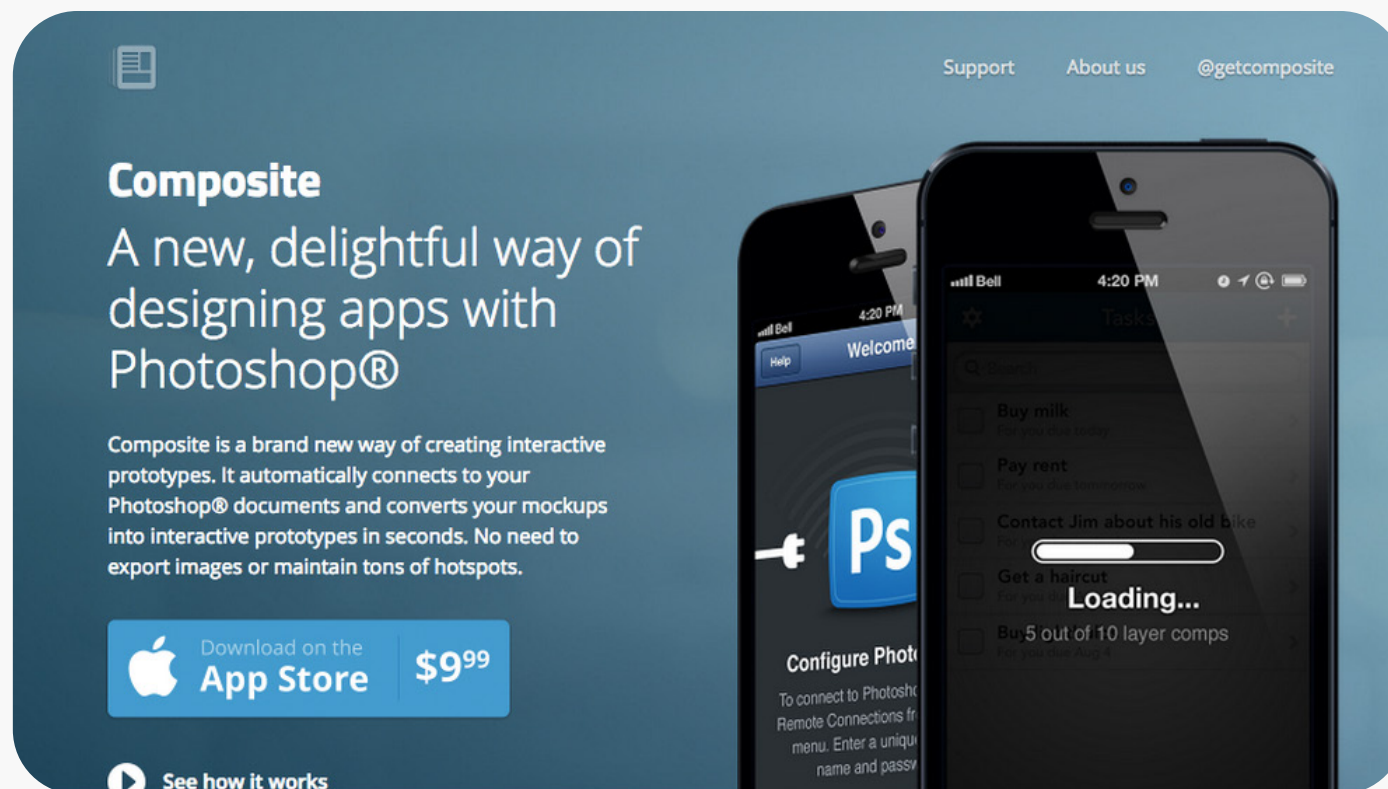

Testing

Test, test, test

Testing

Test, test, test

Always test extensively before going live (or even to beta.) This will help you avoid issues later, especially on mobile apps.

Navigation

Navigation

Because design is limited, creating the right navigation is key to a good mobile interface.

Examples:

Gestures

Gestures

Mobile design is much more focused on interaction than web design. It's important to determine how each movement relates to an action the user is taking.
